Thermage®

Reshaping Your Future

The Non-Surgical facelift that's not only for the face!

Thermage™ is a non-invasive procedure using radiofrequency energy to tighten and smooth skin on the face, neck, abdomen and practically anywhere on the body where there is loose, wrinkled skin. This procedure is great for contouring and defining a sagging jawline, improving wrinkles around the mouth and eyes and tightening a flabby tummy that is common after pregnancy. It even works great on loose, saggy arms and knees. The treatment takes approximately an hour depending on the area being treated with no visible side effects or recovery time. The benefits include long lasting results with no surgery, no injections and little to no downtime. Dr. Roberts has the new and improved version of the Thermage which is faster so your treatments are shorter for more convenience. Call the office for more details.

FAQ'S

What does Thermage do?

Thermage is a deep-heating technology that uses radiofrequency to heat the skin. The heat tightens collagen fibers that have become loose and stretched out with age. The heat also stimulates new collagen growth to make your skin feel thicker and smoother over time.

How does the procedure work?

Dr. Roberts performs the procedures with the FDA-cleared ThermoCool system. The tip on the device is pressed gently against your skin to deliver a pulse of radiofrequency energy. Each pulse lasts about a second and you will feel cooling, a deep heating sensation followed by additional cooling. The tip cools and protects the epidermis while the energy penetrates deep into the skin to heat collagen fibers in the dermis and subcutaneous tissue.

What will I look like after the procedure?

You should feel no pain or discomfort after the procedure. You may experience redness that will resolve within an hour or so, or slight swelling that will disappear within the day. You will be able to put on your make-up and continue your skincare regimen immediately after treatment.

What can I expect?

Overall tighter and smoother skin with softening of wrinkles and improvement of skin tone and texture.

Is it safe?

Thermage is a safe, non-invasive procedure with a 99.8% safety record. Rare side effects may occur but most resolve without any complication.
